

METHOD AND APPARATUS FOR PROVIDING TRANSACTION-LEVEL SECURITY

ABSTRACT OF THE DISCLOSURE

A method and apparatus is presented for providing transaction-level security. The method comprises determining security information associated with at least one object of a transaction and determining if a remote device is capable of providing a level of security indicated by at least a portion of the security information. The method further comprises transmitting the object to the remote device in response to determining that the remote device is capable of providing the level of security.
